

MEMO 4-C 2/96

TO : See Distribution 1977-10-25
FROM : Wolfgang W. Osterhage
SUBJECT : TRANS 2036

1) Contrary to past habit, TRANS 2036 contains only a relatively small number of records.

2) Although I believe that it is free of formal errors, it might still contain a small number of "non-conventional" constructions, especially when HL or LVL information is given in connection with the modifiers PAR, MS, GND etc. However, in one way or another all the information necessary for the user is contained.

The reason for these shortcomings constitutes itself from the fact that one of our compilers has left the CCDN, and the entries on TRANS 2036 are the remainder of his work. Since these entries contained initially a substantial number of all types of errors, I spent some time on correction. In order however not to devote a period which is comparable to the actual compilation time itself, on this task I decided to correct only formal errors and otherwise insert information for the user, whenever necessary, in an unconventional way.

I hope that in the light of this TRANS 2036 will still be acceptable to you.
