Subject: Statistics

Please, find attached the NDS statistics for data requests and data dissemination, for the period 1 January 1974 to 31 December 1974. This period was chosen instead of the agreed 1 April deadline which is not suitable this time due to the early date of the 4C-Meeting.

Table 1b splitting the request statistics by government-lab / university / industry, does not apply to the NDS area, where government labs and university institutes can, in general, not be distinguished. We have one important requestor from industry, namely the Skoda works in CSR, who requested all available UK and ENDF/B evaluated data.

Re table II we refer to the Exfor exchange statistics by NDCC.

Towards the end of this memo you will find a list of some neutron data which we are aware of but which were not yet transmitted in Exfor.

- X-4 backlog -

Attached is a list of works to be compiled in X-4 from the Latin America & East Europe area.

In addition to this list which represents the clearly identified works for compilation, one would have to add about 5 other works of marginal importance for X-4.

EXFOR Backlog - Asia, Africa, Down Under

I. Attached is a list of works for which data to be entered in EXFOR are known to exist or for which there is high probability that data exist.

II. Accompanying remarks:

- 1) The number of subentries indicated is an estimate. In some cases it is very rough.
- 2) Some of the listed works require revision of existing entries.
- 3) Experiments still in progress are not listed.
- 4) Known measurements of fission systematics are not listed even though such data can now be entered in EXFOR. Uncompiled data in this category, especially from India and Israel, are known.
- 5) The Proceeding of the annual all India Conferences on Nuclear and Solid State Physics have not been scanned systematically for data which have not been reported elsewhere.
- 6) Many entries (not listed) are known to require revision or minor corrections. Proof copies must be sent to authors.
