

Memo 4C-3/131

To: Distribution

1 August 1975

From: R. Yaghubian *Yag*

Subject: Entries 10287. and 10413

We noticed that the reference of the entries 10287. (106 subentries, natural chromium) and 10413 (15 subentries, natural chromium and Cr-52) is the same, and there are many similar results in these two entries.

If both entries are legitimate, we would appreciate if the difference between both were explained in the free text. Otherwise the superseded sub-entries should be deleted or labeled as superseded.
