Memo 4C-3/304

To: Distribution
From: M.M.Seits
Subject: CINDA Exchange

1986-10-23

The test phase for NDS CINDA Exchange can be considered concluded. From now on, the contents of the CINDA Exchange tapes that NDS sends to NNDC and NEA-DB will no longer contain area 3 and 4 Reader format records.

NDS will continue the numbering of the WIE... batches. The last one sent out was WIE266. WIE267 being sent now, is the first one in the new format.

The new format will always consist of two files: File 1 will always contain all EXCHANGE format records for area 3 and 4 processed in the current WIE batch. File 2 of the tape to NNDC will contain area 1 READER format records, file 2 of the tape to NEA-DB will contain area 2 READER format records (if there are none, a dummy file is created in each case). Please also see attached samples of the tape specification sheets and the statistics of the EXCHANGE file and READER file creation programs which will always be sent with the relevant tapes.

May I also take this opportunity to remind NNDC and NEA-DB of the two decisions taken at the last 4 centers meeting with regard to the CINDA EXCHANGE system:

1. NDS will NO LONGER process area 4 READER format entries unless they have been sent from CJD;
2. NNDC and NEA-DB will send any area 4 READER format entries they may have directly to CJD;
3. If, however, NDS still receives area 4 READER format entries from NNDC or NEA-DB, they should be in a separate file from area 3 entries and NDS will forward them directly to CJD without performing any checking.

Attached are the revised "CINDA EXCHANGE System Specifications".
