086-094, 096-105, 107-115,  
117-129, 131-140

the code under the keyword ISO-QUANT  
is wrong. The inelastic scattering  
is measured to discrete levels and  
actually levels of Fe <sup>56</sup> are under  
study, even if the measurements on  
natural Fe were made. Therefore the  
code should be (26-Fe-56, INL, DA,  
PAR ).

Subentries :  
141-145, 147-151.

ISO-QUANT  
The code should be  
(26-Fe-56, INL, PAR)

Subentries  
152- 157

ISO -QUANT  
May be it is better to use the code  
(26-Fe-0, INL, DA/DE) with E-MIN and  
E-MAX in COMMON -section.

Subent  
157

Neither in COMMON , nor in DATA  
there is no any information about  
the angle.
