Subject: About necessity (?) compilation the data of some papers. *78/07/31*

INFORMATION COPY

Chukreev

ENTRY 500 had been included in the "The bibliography of integral charged particle nuclear data " (march 1978) in particular.

This paper is "Inelastic scattering of protons by middle atomic weight nuclei at low energies" by G.A.Krivosov et al, published in "Jdernaja Fizika" v.24, p.461, 1976. This paper contains the data about yield of gamma rays at 56 degree angle to beam. In our opinion this paper is not belonged to the category of papers from which the data on cross-sections of the yields of isomers might be extracted easily. Thus, all this contradicts to page 5 of the "The bibliography of integral charged particle nuclear data" (march 1978).

We would like to know the network's opinion on the matter whether it is necessary to compile in the "General EXFOR" format numerical data from this paper and similar ones.
