MEMO CP-A/44

DA51324-0

To: distribution.

From: F.E.Chukreev, N.V.Timofeeva. *FT*

Subject: Dictionaries 27,28,29.

1. Isomeric label '1' should be added for bromine-76 in Dictionary 27.

1.2. The following additions should be made to dictionary 27:
58-Ce-133 (3)

2 isomers exist, not known which one is ground state,

73-Ta-174 (3),

77-IR-184 (3)

2. Using of the code "Pi" for SF2 and SF3 of keyword "Reaction" is incomprehensible. The scientist knew charge state of pions beam always.

I can not remember any experiment where charge state of pions beam was unknown.

Using of code "Pi" for SF3 is unreal too . If charge state of produced pions is unknown, the code 'X' should be used in SF3, as I believe.

Therefore, the code 'Pi' shod be deleted from dictionaries 28 and 29.
