KERNFORSCHUNGSZENTRUM · D-7500 KARLSRUHE · POSTFACH 3640 · TELEX 7826-484

Karlsruhe, March 1976

Last year it was decided to start with an international cooperation in the field of compilation, evaluation and dissemination of integral charged particle reaction data, like cross sections and thick target yields. For details see INDC(NDS)-69, which contains the conclusions of the Consultants' Meeting in Vienna (September 1975). It was also accepted that the Nuclear Data Section of the IAEA should annually convene such Meetings so that the groups actively engaged in handling charged particle reaction data could discuss pertinent subjects. It was proposed that in between the groups should inform each other about the progress of the work, necessary changes in the keywords etc.

At the Consultants' Meeting it was decided that the Charged-Particle-File (KACHAPAG-File) should be based on the EXFOR-format used for the compilation of Neutron-Data. This is possible only if several changes are introduced. At the meeting the proposed changes were discussed at length and many recommendations were formulated. Since we did not receive any objections we assume that these recommendations are generally accepted and that we can proceed with this new version of the EXFOR-format.

In addition to the changes in the codes considered in Vienna the following topic should be discussed: According to the rules given in LEXFOR, metastable states are denoted by Z-S-A-Mi. The number i can be omitted only if the sequence is uncertain. This nomenclature is possibly applicable for neutron reactions, where in general well investigated nuclides are formed. But LEXFOR gives no rules for which an excited state should be called a metastable state. In the case of charged particle induced reactions the nuclides formed are

normally not so well investigated and sometimes it is even not known whether the product is in the ground or the metastable state. Therefore additional information should be given for an unambiguous description of the product, for instance the half-life and/or the energy of the radiation emitted in the decay. Consequently we propose that the number of the metastable state is only optional and that the nuclide formed in the reaction should be unambiguously defined by the properties given under the keywords 'PART-DET' or 'RAD-DET'.

The EXFOR-dictionaries, which were developed for describing neutron data, contain many codes not used for the compilation of cross sections and thick target yields for charged particle induced reactions. For the convenience of compilers we have prepared a list of the codes actually applied in Karlsruhe. As can be seen from table 1 only 7 out of 23 dictionaries are used in full length (neglecting some minor changes). The codes of the other dictionaries applied up to now in the KACHAPAG-File are listed in table 2. This list already contains all the changes approved by the Consultants' Meeting of last year.

(Prof. Dr. H. Münzel)

2 75 930 INFORMATION IDENTIFIER KEYWORDS 3

USED. IN ANY CASE THE DEFINITION MUST BE UNAMBIGUOUS BY  
STATING ADDITIONAL PROPERTIES OF THE STATE, LIKE  
HALF-LIFE AND/OR RADIATION ENERGY.  
FOR SF2 AND SF3 PARTICLES HEAVIER THAN AN ALPHA  
PARTICLE ARE CODED IN THE SAME WAY AS IN SF1 AND SF4.  
IF SF5 TO SF9 CONTAIN MORE THAN ONE CODE A SLASH IS  
USED FOR SEPARATION.

PART-DET THE PARTICLE DETECTED MUST BE EVIDENT EITHER FROM 3  
'ISO-QUANT' OR FROM 'PART-DET'. IF KEYWORD PRESENT, 3  
THEN CODED INFORMATION IN PARENTHESES OBLIGATORY. 3  
SEE DICTIONARY 13

RAD-DET KEYWORD AND CODED INFORMATION IN PARENTHESES ARE  
OBLIGATORY IF THE NUCLIDE OBSERVED IS NOT OBVIOUS FROM  
'REACTION' OR 'DECAY-DATA'. THE FIRST SUBFIELD GIVES  
THE NUCLIDE AND THE ADDITIONAL SUBFIELDS THE TYPES OF  
THE RADIATION OBSERVED (SEE DICT.13).  
IF KEYWORD PRESENT, THE DATA FOR OBSERVED RADIATION HAS  
TO BE GIVEN UNDER 'DECAY-DATA'.

DECAY-DATA KEYWORD OPTIONAL. IF KEYWORD PRESENT, THEN CODED  
INFORMATION IN PARENTHESES OBLIGATORY. THE SUBFIELDS  
ARE SEPARATED BY COMMAS (SF1,SF2,...)

SF1 NUCLIDE Z-S-A(-MX) (SEE 'REACTION')  
SF2 HALF-LIFE (FLOATING POINT NUMBER)

SF3 TYPE OF RADIATION (SEE DICT.13)

SF4 ENERGY OF RADIATION IN KEV (FLOATING POINT NUMBER)

SF5 ABUNDANCE OF RADIATION PER DECAY (FLCAT. PT. NUMB.)

SF... SF3,SF4 AND SF5 MAY BE REPEATED AS OFTEN AS  
NECESSARY

FREE TEXT OPTIONAL.

MONITOR KEYWORD OBLIGATORY EXCEPT WHEN NOT RELEVANT. CODED  
INFORMATION UP TO 13 SUBFIELDS IN PARENTHESES PLUS  
FREE TEXT.

SF1 TO SF4 MONITOR REACTION, NOTATION AS GIVEN  
IN 'REACTION' SF1 TO SF4.

SF5 ACCESSION NUMBER OF MONITOR REACTION IN EXFOR FILE  
SF6 FIRST AUTHOR OF PUBLICATION, ADDITIONAL AUTHORS
