1. Since our restricted manpower was mostly concerned during the last weeks with correcting the KACHAPAG-file according to the new coding rules, implementing the new EXFOR-programs, and preparing the next transtape, we were not able to dig through the about 200 pages of Memos CP-D/34 to D/42 and CP-C/17 to C/24 as well as the different proposed manual-versions and revisions. We will comment on all these papers after having completed the next KACHAPAG-transtape.

In the following, we want to comment shortly one memo and a dictionary update on subjects which are yet implemented or should be implemented immediately.

2. Dictionary Update 770920:

In the expansions for the institute codes 2 GERHEI and 2 GERMPH the cross-references between both codes are misunderstandable and redundant, since both institutes are completely independent as pointed out in CP-B/12 p.3. These cross-references should be omitted.

- 3. Accession Numbers within Codes (re Memo CP-D/39):
 - a) We agree with the proposal to give <u>always</u> 8 digit accession members with 000 in the last 3 digits when no subaccession numbers exists. We agree with the additional note that this coding should be avoided whenever possible. However, in those very few cases, where e.g. a reprint of a

reference to be cited under REL-REF, MONIT-REF etc. is not available immediately, thus preventing a fast compilation, such a possibility should be given.

b) We agree with item 2. of CP-D/39 to make an accession number obligatory with the STATUS-codes SPSDD, DEP, COREL, OUTDT, RNORM. However, the same rules as commented in item a) above should apply.
