Memo CP-D/487

Date: 8 June 2007
To: Distribution
From: O. Schwerer and V. Zerkin
Subject: Dictionary transmission 9094 and new version of CHEX (taking into account wildcards for SF7 in dictionary 236)

- Dictionary transmission 9094 is available and can be downloaded in zipped form, either from the NDS open area, subdirectory TRANS.DICTS, file DICTS-9094.ZIP, or from

<http://www-nds.iaea.org/exfor-master/backup/DICTS-2007-06-08.zip>

Again, the dictionaries are available in archive, TRANS, and DANIEL backup format, and also, as agreed at the last NRDC meeting, in "ZVV" format for use with CHEX.

- This dictionary release is making use of wildcards for SF7 in dictionary 236, as agreed, and as described in memo CP-D/469. This means that some quantity codes with particular SF7 entries are removed from the dictionary and are covered by appropriate entries using wildcards. A new version of CHEX, understanding these wild card dictionary entries, is also provided.
- This new version of CHEX, together with the ZVV formatted dictionaries, can be downloaded from
<http://www-nds.iaea.org/exfor-master/programs/zchex2007-06-08/>
- Apart from the Windows and Linux versions, there is now also, for the first time, a Mac version of CHEX.
- To be on the safe side, I produced also, probably for the last time, a dictionary version with the "full-size" dictionary 236 (with all occurring SF7 entries), including some additions resulting from recent TRANS files which were only needed for this version. This version obviously works also with the previous CHEX version. To avoid confusion, I did not put it on the open area but it is available on individual request.
